HANDLING - INSTALLATION

STORAGE

There are many cases where ECOPANEL packages must be stored in construction areas for a time before their placement. To insure the preservation of their features' qualities it is very important that the rules below are followed:

- ✓ Store packages in their original packaging in covered, dry, well aired-out and flat areas.
- ✓ If this is not possible then cover package with a waterproof material on a sloping surface of about 4°-5°.
- ✓ Air out regularly so as to avoid the gathering of water vapour.
- ✓ Protect from direct sunlight, rain and dust. Check regularly to insure that they are in good condition. Storage time should be kept to a minimum (FIGURE 10).
